CASE STUDY St Anna's Aged Care, Brompton, South Australia

Five days became half an hour.

How a single site home with no corporate office and no IT department put AI to work on compliance and clinical documentation.

Staff were spending more of the day in systems and less on the floor. A standard compliance response that takes one or two people five days by hand now takes around half an hour. Innovation Philosophy's figures.

Inside the home's own environment

Information stays private and is never used to train AI.

Nothing replaced

It sits over the systems you already run.

Humans stay in the loop

It is never the final word.

AgedCareAI

CASE STUDY St. Anna's Residential & Home Care

What one single site home did with AI

St Anna's Aged Care in Brompton has no corporate office, no IT department and only a handful of people on quality. New standards and new systems were pulling staff away from the floor. A couple of years on, AI sits across its clinical records and compliance work, in its own environment.

Compliance gaps

Lifestyle forms were checked against the new standards. They captured a lot about residents' pasts and much less about their present.

Incident reviews

Reviews can look back three to six months. One surfaced a visiting dog who mattered to a resident, a detail the team had missed.

Feedback and complaints

Gathering three months of feedback took about four hours. The system now does that first layer.

Writing and notes

Staff say what they know and it is shaped into clear notes. It helps those with English as a second language, or dyslexia.

Across systems

Who worked in a wing yesterday, and what training are they missing, checked against a month of notes.

Reports in one press

Set reports, like the quarterly resident analysis, run at the press of a button.

AgedCareAI Governance

MORE THAN REPORTING

Where governance work is managed, under the strengthened Aged Care Quality Standards.

CIP Plan

Your continuous improvement plan in one place, with each action tracked.

Policies

A policy library staff can ask plain questions of, instead of searching hundreds of files.

Meetings

Meetings and committees, with minutes and actions kept together.

Forms, board packs

Forms that capture evidence, and board packs ready for each meeting.

Built to sit inside the home

Runs in the home's own environment. Information stays private.

Nothing replaced. It sits over your clinical software, nurse call and roster.

The home's security officer signs off before anything goes ahead.

Live training for staff, and a human stays in the loop throughout.

Where you might start

1. Pick one task where someone reads a lot of history, like incident reviews.
2. Ask your vendor how to get a secure copy of your data that you control.
3. Find out where AI is already used in your home, and make it safe.
